DETAILED ACTION

- 1. This is in response to the amendment filed on 22 December 2004.
- 2. Claims 1-52 are pending in the application.
- 3. Claims 1-10,12,13,16-24 and 30-42 have been rejected.
- 4. Claims 11, 14, 15, 25-29 and 43-52 have been allowed.

Response to Arguments

5. Applicant's arguments filed 22 December 2004 have been fully considered but they are not persuasive.

The applicant argues that the current application is not the same invention as U.S. Patent No. 6,636,689 B1

The examiner respectfully disagrees. After further review of the claims from the current applicant and the Stebbings patent, the examiner finds the claims to be the same. The examiner maintains the double patenting rejection.

Double Patenting

A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer cannot overcome a double patenting rejection based upon 35 U.S.C. 101.

Art Unit: 2131

6. Claims 1-9, 12, 13, 16-23, 30-36 and 38-42 are rejected under 35 U.S.C. 101 as claiming the same invention as that of claims 1-9, 12, 13 and 32-37 of prior U.S. Patent No. 6,636,689 B1. This is a double patenting rejection.

As to claims 1, 12 and 16, Stebbings discloses reading the data from the media. Stebbings discloses detecting the modulation of the at least one modified modulation rule associated with the data. Stebbings discloses deriving an embedded authentication key or component thereof responsive to the detecting step. Stebbings discloses comparing the embedded authentication key or component thereof, to at least one authentication key or component thereof. Stebbings discloses authenticating the at least one of the media and the data responsive to the comparing step. Stebbings discloses outputting the data as at least one of audio, video, audio data, video data and digital data substantially free of the modulation of the at least one modified modulation rule [column 29, lines 34-56].

As to claims 2, 17 and 30, Stebbings discloses that the deriving derives the embedded authentication key or component thereof as a combination of on-off binary codes representing ones and zeros to represent a predetermined symbol sequence [column 29, lines 57-61].

As to claims 3, 18 and 31, Stebbings discloses that the outputting step further includes the step of converting the data into a stereo analog signal without transferring, in the data, the modulation of the at least one modulation rule used to derive the embedded authentication key or component thereof [column 29, lines 62-67].

As to claims 4, 19 and 32, Stebbings discloses locating at least one modified modulation rule on at least one of a per track basis and interval basis throughout the media such that the

Art Unit: 2131

authentication step is performed for at least one of each track to be played, throughout playback and throughout recording [column 30, lines 1-8].

As to claims 5, 20 and 33, Stebbings discloses that the authenticating step includes a step of authenticating using different authentication keys for each disc track [column 30, lines 9-12].

As to claims 6, 21 and 34, Stebbings discloses that the step of authenticating the at least one of the data and the media via at least two different authentication keys, each of which successively must be authenticated before said data is finally output via the outputting step [column 30, lines 13-17].

As to claim 7, Stebbings discloses authenticating the at least one of the media and the data over a plurality of interconnected computer networks comprising at least one of a local network, global network and the Internet [column 30, lines 18-21].

As to claims 8, 22 and 35, Stebbings discloses that the authenticating step further includes a step of using at least three different sources for compiling compound authentication keys [column 30, lines 22-25].

As to claims 9, 23 and 36, Stebbings discloses that the deriving step further comprises the step of at least one of decoding and decrypting the embedded authentication key or component thereof for subsequent authentication [column 30, lines 26-29].

As to claim 13, Stebbings discloses a method for authenticating at least one of a media and data to be stored on the media, in order to prevent at least one of piracy, unauthorized access and unauthorized copying of the data stored on the media. Stebbings discloses a data message comprising modulation via at least one modified modulation rule to generate at least one authentication key or component thereof for authenticating the data message. Stebbings

discloses that the modified modulation rule cannot be readily altered, obscured nor removed from the data message without simultaneously degrading or impairing a quality of an audible component of the data message. Stebbings discloses that the data message is transmitted substantially free of the modified modulation rule thereby preventing a destination processor from reading and subsequently authenticating the data message [column 30, lines 30-35].

As to claim 38, Stebbings discloses locating at least one modified modulation rule on at least one of a per track basis and interval basis throughout the media such that the authentication step is performed for at least one of each track to be played, throughout playback and throughout recording [column 32, lines 53-58].

As to claim 39, Stebbings discloses that the authenticating step includes a step of authenticating using different authentication keys for each disc track [column 32, lines 59-61].

As to claim 40, Stebbings discloses that the step of authenticating the at least one of the data and the media via at least two different authentication keys, each of which successively must be authenticated before said data is finally output via the outputting step [column 32, lines 62-65].

As to claim 41, Stebbings discloses that the authenticating step further includes a step of using at least three different sources for compiling compound authentication keys [column 33, lines 3-6].

As to claim 42, Stebbings discloses that the deriving step further comprises the step of at least one of decoding and decrypting the embedded authentication key or component thereof for subsequent authentication [column 33, lines 7-9].

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 7. Claims 10, 24 and 37 are rejected under 35 U.S.C. 103(a) as being unpatentable over Stebbings U.S. Patent No. 6,636,689 B1 as applied to claims 1, 12 and 16 above, and further in view of Hogan U.S. Patent No. 5,828,754.

As to claims 10, 24 and 37, Stebbings does not teach that the comparing step further comprises the step of comparing the at least one modified modulation rule comprising the at least one authentication key or component thereof, to at least one lookup table of valid modified modulation rule output values comprising the at least one authentication key or component thereof.

Hogan teaches a lookup table that contains modified modulation rules and authentication keys [column 5, lines 24-58].

Therefore, it would have been obvious to a person having ordinary skill in the art at the time the invention was made to have modified Stebbings so that the modified modulation rules and the authentication keys were contained in the lookup table.

It would have been obvious to a person having ordinary skill in the art at the time the invention was made to have modified Stebbings by the teaching of Hogan because the tables can be used for examining all possible alternatives to determine the best choices for minimizing DSV [column 5 line 64 to column 6 line 25].

Allowable Subject Matter

8. Claims 11, 14, 15, 25-29 and 43-52 are allowed.

As to claim 11, Stebbings teaches a method for authenticating at least one of a media and data stored on the media, in order to prevent at least one of piracy, unauthorized access and unauthorized copying of the data stored on the media. Stebbings teaches a data disc comprising media containing at least one modified modulation rule comprising at least one authentication key or component thereof for authenticating at least one of the media and the data, all discussed above.

Neither Stebbings nor prior art teaches that the at least one of the media and the data may be outputted in at least one of an analog and audio form substantially error free and free of the at least one modified modulation rule by at least one of an error removal process and the at least one authentication key or component thereof. Neither Stebbings nor prior art teaches allowing a user to experience the media without experiencing the modulation rules removed therefrom via the error removal process.

As to claims 14 and 15, prior art does not disclose or fairly teach a system for authenticating at least one of a media and data stored on the media, in order to prevent at least one of piracy, unauthorized access and unauthorized copying of the data stored on the media, as discussed above. Prior art does not disclose or fairly teach that the data stored on the media is modulated via at least one modified modulation rule to generate at least one authentication key or component thereof for authenticating at least one of the media and the data, as discussed above. Prior art does not disclose or fairly teach that the at least one of the media and the data may be outputted in an analog and/or audio form substantially error free and free of the at least

Application/Control Number: 09/315,102

Art Unit: 2131

one modified modulation rule by at least one of an error removal process and the at least one

authentication key or component thereof, as discussed above. Prior art does not disclose or fairly

teach a focus servo, tracking servo, laser, lens and mirror, together comprising a portion of a disc

reader housed in a data player device.

Any claim not directly addressed is allowed due to the virtue of dependency.
